Senior PHP Developer

Description

CloudSEK's SaaS-based product helps a client assess security real-time from the perspective of an attacker, 24*7. Our monitors track our client's various internet-based resources for potential security risks. Instead of using traditional static threat detection engines and manual verification process, our monitors use Machine Learning and Artificial Intelligence to identify risks.

Qualifications

1. 3-8 years of production programming experience with solid PHP design/coding/testing and building large scale distributed web sites.
2. Experience working with PHP framework (Zend)
3. Experience working in a formal web/software development environment
4. Experience with LAMP technologies.
5. Object Oriented software coding experience for web application
6. Test Driven Development an asset.
7. Strong knowledge of the following programming languages: PHP, AJAX, MYSQL and JavaScript.
8. Nice to have: Front End technologies such as REST, Web Service, Backbone, nodeJs, requireJs, underscore, bootstrap, jQuery, jQueryMobile, JSON, HTML5, or CSS.

Responsibilities

1. Design, construct, develop, code, debug, document and maintain web site applications using our in-house development processes and methodologies.
2. Conform to define software design methodology for the development and implementation of Internet based application to support all aspects of web site functionalities.
3. Perform code review and evaluation and determine recommendations for adaptation.
4. Creation of Low-Level Design Document from Functional Specification and Technical design document.
5. Conduct Low Level Design Review with Team Lead and Technical Lead to ensure that the Low-Level Designs conform to respective Functional Specifications and Technical Designs.
6. Participate in code reviews with Team Lead and Technical Lead to ensure that the code adheres to the Low-Level Design, and that the code meets coding standards compliance.
7. Apply rigorous testing methodologies and use cases to analyse and verify software programs, algorithms, data transformation, forms, reports and interfaces.
8. Timely communication of issues and status information to Team Lead concerning system development activities.
9. Generate application test data as necessary and validate any data conversion requirements for final implementation and production rollout.
10. Participate in project status review meeting with Team Lead.
